

24 SKILLS • 11 TOOLS • FREE • MIT

YouTube Agent Pro *Setup guide.*

An AI agent for YouTube in Claude Code: ideas, scripts, hooks, titles, thumbnails, SEO and sponsorship.

youtube-agent-pro

Public

Twenty-four Claude skills that run a YouTube channel, end to end.

MIT License

Open source

24 skills

PRICE

₹0

free to use

No signup · No API key

24 skills

21 hook formulas

11 Python tools

github.com/ahmedsakri/youtube-agent-pro

BEFORE YOU START

What you *need*.

Claude Code

The terminal app, the desktop app or an IDE. Skills install and run here.

Python 3

Only for the 11 tools. Nothing to pip install. Check it:
`python3 --version`

Ten minutes

To write your voice file with `/yt-voice`. Skip it and the scripts will not sound like you.

NOTHING ELSE

✓ No signup

✓ No API key

✓ Nothing to connect

It writes. You upload.

Nothing is published to YouTube for you. `/yt-viral` and `/yt-collab` read public listings only and never log in as you.

THE EASY WAY

Add the *marketplace.*

1 add

2 install

3 ready

CLAUDE CODE

```
/plugin marketplace add ahmedsakri/youtube-agent-pro  
/plugin install youtube-agent-pro
```

What those two lines do

The first registers this repo as a plugin marketplace. The second installs the plugin from it. A marketplace in Claude Code is just a git repo with a marketplace.json, so there is nothing central to sign up for.

✓ installed

all 24 /yt- skills are now ready

Update later: /plugin marketplace update youtube-agent-pro

OTHER WAYS

Prefer to do it *yourself?*

B Clone and copy

global

TERMINAL

```
git clone
https://github.com/ahmedsakri/youtube-agent-
pro
cp -r youtube-agent-pro/skills/yt*
~/.claude/skills/
```

C Project only

one repo

Copy the same yt* folders into your project's
.claude/skills/ instead. They then work in that project
only.

D No Claude Code

fallback

Paste any single SKILL.md at the top of a chat and it runs
as a mode. You lose the Python tools, but the reasoning
still works.

Not sure? Use the marketplace method (page 3). Two
lines, it does the rest.

STEP 1 • TEN MINUTES

Teach it *your* *voice.*

Every skill reads one file. You say the words out loud, so it has to sound like you.

FASTEST

Let /yt-voice write it

Send three of your own videos or transcripts, then run /yt-voice. It runs voiceprint.py to measure how you actually talk and writes
~/.claude/youtube/voice.md.

WHAT THE FILE CAPTURES

Who I talk to

One real person, not "creators".

How I talk

Your real transcripts, measured.

Words I never use

Unlock. Game-changer. Be specific.

Words I do use

Your tics. Keep them.

What I won't claim

Numbers and tools you can't show.

My format

Length, on camera or not.

No voice.md yet? Every skill asks for three of your videos first.

ONE VIDEO, START TO FINISH

The *full run*.

Ask /yt, the hub, and it routes you. Or run the pipeline yourself, stopping at each gate.

1

Idea

/yt-idea scores it before you film.

2

Brief

/yt-brief turns it into a shot list.

3

Script

/yt-script: hook panel, then the spoken script.

4

Package

/yt-package + /yt-thumbnail, linted as one pairing.

5

Find it

/yt-seo + /yt-chapters for the search surface.

6

Learn

/yt-retention + /yt-analytics find the one fix.

THE 24 SKILLS • 1 OF 5

Make the *video*.

/yt-idea

needs: a niche

A niche into scored ideas, before you film the wrong one.

TRY /yt-idea ideas for my channel

/yt-script

needs: an idea

One idea in, a full script out. Five hooks off 21 formulas, scored.

TRY /yt-script why my videos get no views

/yt-brief

needs: a script

A script into a shot list: framing, b-roll, gear, runtime.

TRY /yt-brief for the script above

/yt-chapters

needs: a transcript

Chapters checked against YouTube's rules, so they render.

TRY /yt-chapters transcript.srt

THE 24 SKILLS • 2 OF 5

Package *it*.

/yt-package

needs: a draft title

Title and thumbnail text as one pairing. Checks truncation, repeats, vague words.

TRY /yt-package for this video

/yt-thumbnail

needs: a title

The thumbnail as a concept: one idea, three elements, three words. Linted and A/B'd.

TRY /yt-thumbnail concepts for this

/yt-seo

needs: a topic

The description, the tags worth keeping, and three queries to win.

TRY /yt-seo write my description

The pairing is the unit. A thumbnail that repeats the title wastes half the click surface, so these are linted together.

THE 24 SKILLS • 3 OF 5

Read the *numbers*.

/yt-analytics

needs: a Studio export

The funnel read for the one number holding a video back: impressions, CTR, retention.

TRY `/yt-analytics read my stats`

/yt-retention

needs: retention CSV

The retention curve read properly: the hook leak, the cliffs, the slide.

TRY `/yt-retention retention.csv`

/yt-funnel

needs: channel page

The trailer, above-the-fold and sections that turn browsers into subscribers.

TRY `/yt-funnel fix my channel page`

/yt-audit

needs: channel link

The whole channel, ending in ONE fix, not twenty.

TRY `/yt-audit youtube.com/@you`

THE 24 SKILLS • 4 OF 5

Grow *it*.

/yt-viral

needs: your niche

What works in your niche, ranked by multiple over each channel's own median.

/yt-trend

needs: your niche

A 90-day calendar: seasonal demand and the evergreen-to-timely mix.

/yt-series

needs: a big topic

A series or playlist as a binge: each video earns the next click.

/yt-collab

needs: your niche

Channels to collaborate with, by audience overlap, plus the pitch.

/yt-endscreen

needs: retention

End screens and cards placed to keep the session going.

THE 24 SKILLS • 5 OF 5

Multiply, then *earn.*

/yt-shorts

needs: a transcript

The Shorts hiding inside a long video, each with a new first line.

/yt-repurpose

needs: a transcript

One video into a thread, a LinkedIn post, a newsletter and a blog outline.

/yt-plan

needs: your hours

A week that fits your hours: one anchor, one cheap one, three Shorts.

/yt-sponsor

needs: your views

A defensible rate card, the reply to the brand, and the integration.

/yt-comment

needs: pasted comments

Comments triaged into piles, replies in your voice, which to pin.

UNDER THE HOOD

Eleven *tools*.

Plain Python 3. No installs. Claude runs them for you. They are heuristics, not predictors, and they are why the skills are more than prompts.

`ideascore.py`

Scores a video idea on four axes.

`hookscore.py`

Scores a hook on five properties.

`title.py`

Lints a title and thumbnail as one pair.

`thumblint.py`

Lints a thumbnail concept.

`funnel.py`

Finds the binding constraint.

`retention.py`

Where viewers left, and what was said.

`ratecard.py`

A sponsorship rate from your views.

`voiceprint.py`

Measures how you actually talk.

`deadair.py`

Edit decision list from a transcript.

`chapters.py`

Chapters that pass YouTube's rules.

`swipe.py`

Outliers by own-channel multiple.

THE ONE RULE

Nothing *publishes*.

Every skill writes. You upload. That is the whole difference between this and a bot that runs your channel into the ground.

Every run ends the same way

A block you copy, and one question. You decide, every time, with the words in front of you.

Ship it, or change it?

Reads, never scrapes

/yt-viral and /yt-collab use public listings only. Never your login.

Invents no numbers

If a skill wants a figure it does not have, it asks you or writes without it.

IF IT BREAKS

Quick *fixes.*

/yt- commands not found

Close and reopen Claude Code once. Then run `ls ~/.claude/skills | grep yt-` and you should see 24 folders.

python3: command not found

Install Python 3 from python.org. The tools need nothing else.

/yt-viral skipped a channel

It needs about four videos per channel to find a median. Add more videos or another channel.

A score looks wrong

The scorers are heuristics. A low score means look again, not a verdict.

Update to the latest

Run `/plugin marketplace update youtube-agent-pro`, or git pull your clone and copy the folders again.

THE LINK

Get the *skill*.

youtube-agent-pro

Public

Twenty-four Claude skills that run a YouTube channel. Use it, change it, ship it.

MIT License

Open source

24 skills

github.com/ahmedsakri/youtube-agent-pro

Your first ten minutes

- ✓ Add the marketplace and **install** in Claude Code
- ✓ Run **/yt-voice** to write your voice.md from three videos
- ✓ Run **/yt-idea**, then **/yt-script** on the winner

Built by **Ahmed Sakri**. Based on the open-source **youtube-agent-skill** by Jake Schincariol (MIT).

Every skill ends with one question.

Ship it, or change it?
