YouTube Agent Pro *Setup guide.*

An AI agent for YouTube in ChatGPT & Codex: ideas, scripts, hooks, titles, thumbnails, SEO and sponsorship.

youtube-agent-pro

Public

Twenty-four skills that run a YouTube channel, for ChatGPT and Codex.

free to use

No signup · No API key

24 skills

21 hook formulas

11 Python tools

github.com/ahmedsakri/youtube-agent-pro

TAP TO JUMP

The *contents.*

Every row is a link. The whole guide is clickable, including each skill and tool.

What you need

03

Install

04

Teach it your voice

06

The full run

07

The 24 skills

08

The 11 tools

13

Nothing publishes

14

Quick fixes

15

Get the skill

16

BEFORE YOU START

What you *need*.

ChatGPT & Codex

The Codex CLI, or ChatGPT with skill upload. Skills install and run here.

Python 3

Only for the 11 tools. Nothing to pip install.
Check it: `python3 --version`

Ten minutes

To write your optional voice file with `/yt-voice`. Skip it and the scripts are more generic.

NOTHING ELSE

No signup

No API key

Nothing to connect

It writes. You upload.

Nothing is published to YouTube for you. `/yt-viral` and `/yt-collab` read public listings only and never log in as you.

THE EASY WAY

Install the *pack*.

1 add

2 install

3 ready

TERMINAL (CODEX)

```
git clone https://github.com/ahmedsakri/youtube-agent-pro
cd youtube-agent-pro
python3 scripts/install.py
```

What that does

The installer copies all 24 skills to `~/.agents/skills` with shared resources and license notices. It refuses conflicting skills; use `--force` to back up and replace. For ChatGPT, upload the skill folders instead.

✓ installed

all 24 skills are now ready

Update later: `git pull` then `python3 scripts/install.py --force`

OTHER WAYS

Prefer to do it *yourself?*

A Clone and copy

global

TERMINAL

```
git clone  
https://github.com/ahmedsakri/youtube-agent-  
pro  
cp -r youtube-agent-pro/skills/yt*  
~/agents/skills/
```

B Project only

one repo

Copy the same `yt*` folders into your project's skills directory instead. They then work in that project only.

C Paste a skill

fallback

Paste any single `SKILL.md` at the top of a chat and it runs as a mode. You lose the Python tools, but the reasoning still works.

Not sure? Use the install method on page 4. It does the rest.

STEP 1 • OPTIONAL

Teach it *your voice.*

An optional profile every skill can read. You say the words out loud, so it helps to sound like you.

FASTEST

Let /yt-voice write it

Send three of your own videos or transcripts, then run `/yt-voice`. It runs `voiceprint.py` to measure how you talk and writes a voice profile.

WHAT THE FILE CAPTURES

Who I talk to

One real person, not "creators".

How I talk

Your real transcripts, measured.

Words I never use

Unlock. Game-changer. Be specific.

Words I do use

Your tics. Keep them.

What I won't claim

Numbers and tools you can't show.

My format

Length, on camera or not.

No voice profile yet? Skills still work; they just ask for samples when useful.

ONE VIDEO, START TO FINISH

The *full run*.

Ask `/yt`, the hub, and it routes you. Or run the pipeline yourself, stopping at each gate.

1

Idea

`/yt-idea` scores it before you film.

2

Brief

`/yt-brief` turns it into a shot list.

3

Script

`/yt-script`: hook panel, then the spoken script.

4

Package

`/yt-package` + `/yt-thumbnail`, linted as one pairing.

5

Find it

`/yt-seo` + `/yt-chapters` for the search surface.

6

Learn

`/yt-retention` + `/yt-analytics` find the one fix.

THE 24 SKILLS • 1 OF 5

Make the *video*.

/yt-idea

needs: a niche

A niche into scored ideas, before you film the wrong one.

TRY /yt-idea ideas for my channel

/yt-script

needs: an idea

One idea in, a full script out. Five hooks off 21 formulas, scored.

TRY /yt-script why no views

/yt-brief

needs: a script

A script into a shot list: framing, b-roll, gear, runtime.

TRY /yt-brief for the script

/yt-chapters

needs: a transcript

Chapters checked against YouTube's rules, so they render.

TRY /yt-chapters file.srt

THE 24 SKILLS • 2 OF 5

Package *it*.

/yt-package

needs: a draft title

Title and thumbnail text as one pairing. Checks truncation, repeats, vague words.

TRY /yt-package for this

/yt-thumbnail

needs: a title

The thumbnail as a concept: one idea, three elements, three words. Linted and A/B'd.

TRY /yt-thumbnail concepts

/yt-seo

needs: a topic

The description, the tags worth keeping, and three queries to win.

TRY /yt-seo write my description

The pairing is the unit. A thumbnail that repeats the title wastes half the click surface, so these are linted together.

THE 24 SKILLS • 3 OF 5

Read the *numbers*.

/yt-analytics

needs: a Studio export

The funnel read for the one number holding a video back: impressions, CTR, retention.

TRY `/yt-analytics my stats`

/yt-retention

needs: retention CSV

The retention curve read properly: the hook leak, the cliffs, the slide.

TRY `/yt-retention file.csv`

/yt-funnel

needs: channel page

The trailer, above-the-fold and sections that turn browsers into subscribers.

TRY `/yt-funnel my channel page`

/yt-audit

needs: channel link

The whole channel, ending in ONE fix, not twenty.

TRY `/yt-audit youtube.com/@you`

THE 24 SKILLS • 4 OF 5

Grow *it*.

/yt-viral

needs: your niche

What works in your niche, ranked by multiple over each channel's own median.

/yt-trend

needs: your niche

A 90-day calendar: seasonal demand and the evergreen-to-timely mix.

/yt-series

needs: a big topic

A series or playlist as a binge: each video earns the next click.

/yt-collab

needs: your niche

Channels to collaborate with, by audience overlap, plus the pitch.

/yt-endscreen

needs: retention

End screens and cards placed to keep the session going.

THE 24 SKILLS • 5 OF 5

Multiply, then *earn.*

/yt-shorts

needs: a transcript

The Shorts hiding inside a long video, each with a new first line.

/yt-repurpose

needs: a transcript

One video into a thread, a LinkedIn post, a newsletter and a blog outline.

/yt-plan

needs: your hours

A week that fits your hours: one anchor, one cheap one, three Shorts.

/yt-sponsor

needs: your views

A defensible rate card, the reply to the brand, and the integration.

/yt-comment

needs: pasted comments

Comments triaged into piles, replies in your voice, which to pin.

UNDER THE HOOD

Eleven *tools*.

Plain Python 3. No installs. The agent runs them for you. They are heuristics, not predictors, and they are why the skills are more than prompts.

ideascore.py Scores a video idea on four axes. ↗

hookscore.py Scores a hook on five properties. ↗

title.py Lints a title and thumbnail as one pair. ↗

thumblint.py Lints a thumbnail concept. ↗

funnel.py Finds the binding constraint. ↗

retention.py Where viewers left, and what was said. ↗

ratecard.py A sponsorship rate from your views. ↗

voiceprint.py Measures how you actually talk. ↗

deadair.py Edit decision list from a transcript. ↗

chapters.py Chapters that pass YouTube's rules. ↗

swipe.py Outliers by own-channel multiple. ↗

THE ONE RULE

Nothing *publishes*.

Every skill writes. You upload. That is the whole difference between this and a bot that runs your channel into the ground.

Every run ends the same way

A block you copy, and one question. You decide, every time, with the words in front of you.

Ship it, or change it?

Reads, never scrapes

/yt-viral and /yt-collab use public listings only. Never your login.

Invents no numbers

If a skill wants a figure it does not have, it asks you or writes without it.

IF IT BREAKS

Quick *fixes.*

skills not found

Restart your client once. Then check `ls ~/.agents/skills | grep yt-` and you should see 24 folders.

python3: command not found

Install Python 3 from python.org. The tools need nothing else.

/yt-viral skipped a channel

It needs about four videos per channel to find a median. Add more videos or another channel.

A score looks wrong

The scorers are heuristics. A low score means look again, not a verdict.

Update to the latest

Run `git pull` then `python3 scripts/install.py --force`.

Open source

24 skills

github.com/ahmedsakri/youtube-agent-pro

Your first ten minutes

- ✓ Clone the repo and run **python3 scripts/install.py** for Codex
- ✓ Run **/yt-voice** to write your voice profile from three videos
- ✓ Run **/yt-idea**, then **/yt-script** on the winner

Every skill ends with one question.

Ship it, or change it?
